## → Lab#1, NLP Spring 2023

This is due on 2023/03/06 15:30, commit to your github as a PDF (lab1.pdf) (File>Print>Save as PDF).

IMPORTANT: After copying this notebook to your Google Drive, please paste a link to it below. To get a publicly-accessible link, hit the *Share* button at the top right, then click "Get shareable link" and copy over the result. If you fail to do this, you will receive no credit for this lab!

## Student ID: B0928005

Name:湯嘉為

## Question 1 (100 points)

Let's switch over to coding! Write some code in this cell to compute the number of unique word **tokens** in this paragraph (5 steps of Text Normalisation: 1. Lowercase Conversion, 2. Remove punctuations, 3. Stemming, 4. Lemmatisation, 5. Stopword Removal). Use a whitespace tokenizer to separate words (i.e., split the string by white space). Be sure that the cell's output is visible in the PDF file you turn in on Github.

## 按兩下 (或按 Enter 鍵) 即可編輯

```
paragraph = '''Last night I dreamed I went to Manderley again. It seemed to me
that I was passing through the iron gates that led to the driveway.
The drive was just a narrow track now, its stony surface covered
with grass and weeds. Sometimes, when I thought I had lost it, it
would appear again, beneath a fallen tree or beyond a muddy pool
formed by the winter rains. The trees had thrown out new
low branches which stretched across \ensuremath{\mathsf{my}} way. I came to the house
suddenly, and stood there with my heart beating fast and tears
filling my eyes."
# DO NOT MODIFY THE VARIABLES
tokens = 0
word_tokens = []
 \hbox{\tt\# YOUR CODE HERE! POPULATE THE tokens and word\_tokens VARIABLES WITH THE CORRECT VALUES! } 
tokens = paragraph.lower()
from nltk import word_tokenize
tokens = word tokenize(tokens)
def remove_punct(token):
   return [word for word in token if word.isalpha()]
paragraph = remove_punct(tokens)
from nltk.stem import PorterStemmer, LancasterStemmer
lanc = LancasterStemmer()
stemmed lanc = [lanc.stem(token) for token in tokens]
